

Data download on the go - secure and limitless!

Small investment with big impact.

With the new VDO Remote DL 4G in conjunction with the Tachograph Management Download Service, customers can make a remote download of the DTCO tachograph data now via LTE. The data is downloaded flexibly and automatically, independent of time and place from all European countries, without the driver having to intervene. Compliance with the specified download deadlines is therefore no problem, because the wireless transmission of mass storage and driver card data is fully automatic and secure – no matter where your vehicle is currently located.

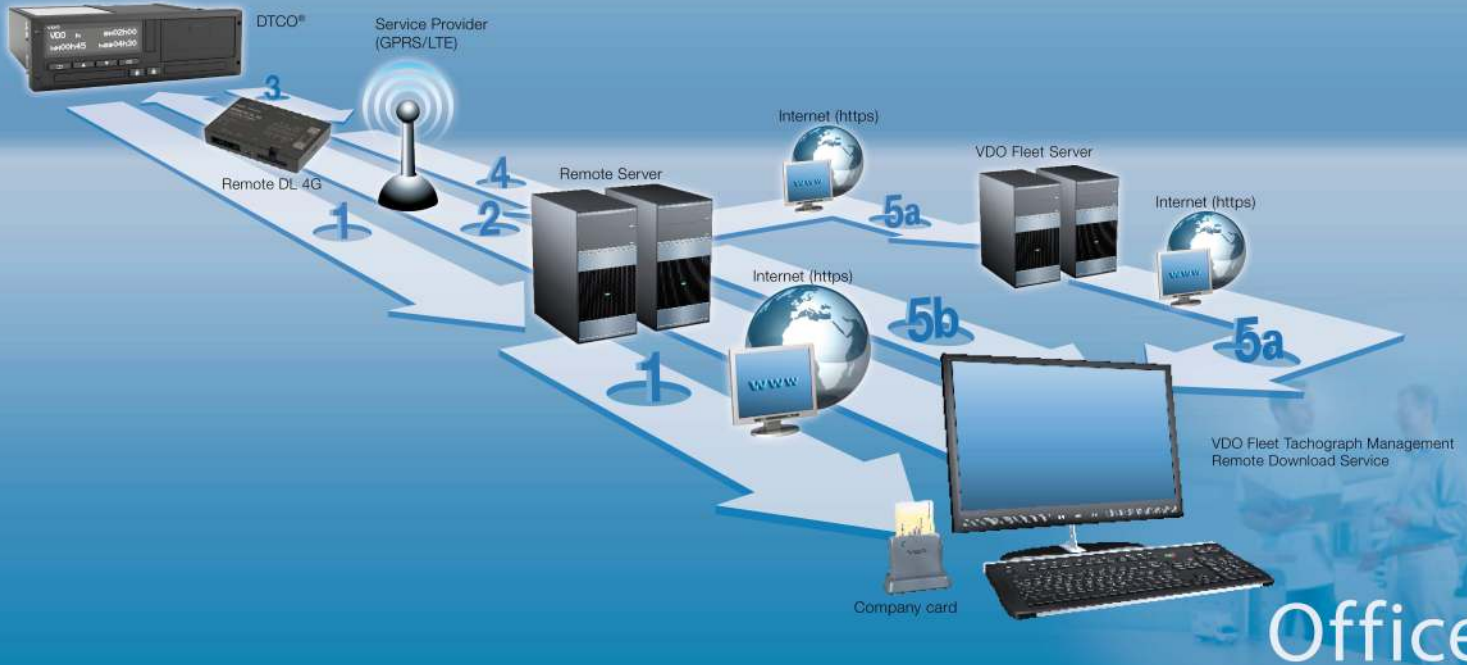

Make your fleet work routine much easier

- no time required, the download is completely automatic
- no staff required on site: saves time and money!
- regardless of time and place throughout Europe
- important database for the further optimization of everyday fleet life
- no company card required in the truck, no need to leave the office
- no more penalties, legal requirements are met
- readout process very fast thanks to LTE technology

Remote Download DL4G

The VDO Fleet Service Remote Download automatically transmits driver card and VU data to your tachograph management at the times you specify and from all European countries.

You no longer need separate schedules, nor do you have to manually download the data. Just set your times, and the data will send itself. The only hardware you need is the Remote DL4G.

Plug and play with our quick install harness, behind the tachograph.

Maps Tracking system can be used with this device.

Live driver availability and driver information can be seen in VDO Fleet with this device.

Capability for data to be either put into VDO Fleet, select few tachograph analysis providers or downloaded locally to a PC.

MAPS - Vehicle Track and Trace

Using either DL4G or VDO Link in combination with VDO Fleet means you also have access to our MAPS tracking information.

Easily track the live and historic journeys drivers and vehicles have taken.

Built using Google Maps, live traffic updates and road works.

Geofencing means you can mark points of interest and be notified via email when a vehicle enters or leaves multiple zones of your choosing.

Driver availability built in, so you can see remaining daily and weekly driving and rest times as well as any reductions to rest or extensions to driving time.

View the next shift start time as well as current shift end time.

MAPS specific reports are available in VDO Fleet.
